Test Documentation – Internship Learning Evaluation System

1. TESTING APPROACH
   The system was tested using unit tests (pytest) for backend functionality and Jest (frontend) for UI validation.

2. BACKEND TESTING (PYTEST)
   Tests implemented:
   - User creation (Student, supervisors, Admin)
   - Internship placement
   - Duplicate placement prevention
   - Weekly log creation
   - Weekly log submission validation
   - Review and approval workflow
3. SAMPLE TEST CASES

TEST	EXPECTED	RESULT
test_create_student_user	User created Successfully	PASSED
test_create_weeky_log	Weekly log created Successfully	PASSED
test_create_placement	Placement assigned to Student	PASSED
test_workplce_can_review_log	Status = Reviewed	PASSED
test_academic_can_approve_reviewed_log	Status = Approved	PASSED

4. COVERAGE REPORT
   - Coverage tool used: pytest-cov
   - Report generated as HTML
   - Shows percentage of code tested (~75% target)
5. FRONTEND TESTING (JEST)
   Tests attempted:
   - Login and signup rendering
   - Input validation
   - Button interaction

   Status:

   - Some tests failing due to module dependencies (AuthContext, imports)
6. OVERALL TEST RESULT
   Backend: Stable and passing
   Frontend: Partial (dependency issues, not core logic failure)
